HAPPY TONGUE

The Happy Tongue is a solid mouthpiece uniquely ported to give maximum tongue relief. The Happy Tongue is curved to be softer on the bars and slow in applying tongue pressure.

BOMBER BLUE

The Bomber Blue is a unique bit which produces amazing results for the majority of horses. The mouthpiece is ported to give tongue relief. The nylon composite material is light in the mouth and encourages salivation. It is particularly well suited to horses that object to metal mouthpieces. The Bombers Lifetime Guarantee does not extend to materials that can be chewed.

HAPPY TONGUE STRAIGHT SWIVEL

The Happy Tongue Straight is ported to relieve tongue pressure but is not curved. The swivel allows the horse to place the mouthpiece at the angle most comfortable for them, this angle does not change when the contact is taken up.

BARREL 20

The Barrel joint spreads the pressure over a larger area of the tongue and lessens the pressure on the bars. The Barrel allows for independent action on each rein.

PORTED BARREL

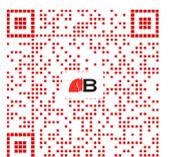

The central barrel allows for a separation of reins aids while giving tongue relief, enabling a fine tuning of communication. The limited movement of the barrel allows the port to adjust to fit a wide range of mouth configurations.

INTRODUCING THE PORTED PIVOT

The best of the Happy Tongue and the Ported Barrel. The Pivot Ported allows for independent lateral aids while maintaining the profile of the mouthpiece in the mouth. The Pivot Ported will take pressure off the tongue however, the contact is more stable due to less movement in the mouthpiece. *It is well suited to tongue sensitive horses that have difficulty flexing and do not put enough weight in the reins.*

ULTRA COMFY LOCK UP

The Ultra Comfy shape is such that it follows the contour of the horse's tongue. The centre joint has been double locked to ensure that the angle over the tongue remains correct, even when the reins are taken up. It retains individual lateral aids.

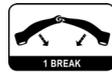

MOULDED MULLEN

This moulded mouthpiece has been shaped and flattened. It is angled at 45 degrees to offer an exceptionally soft and evenly distributed pressure over and around the tongue. The Bombers Lifetime Guarantee does not extend to materials that can be chewed.

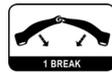

ELLIPTICAL

The Elliptical concentrates pressure onto a smaller surface area. This bit will suit a horse that pushes the bit with its tongue. The horse will draw its head back and tuck its chin in.

MCHARDY

A horse shaking its head when bit pressure is applied or trying to put its tongue over the bit are classic signs the horse has a sensitive tongue. With this in mind the McHardy was created, it has a medium port creating space for the tongue, relieving pressure. The Buster Roller in the middle increases bar pressure and as a result extends the head and brings the nose in giving more control.

SNAFFLE

Our Snaffle is popular due to the curved mouthpiece which distributes pressure evenly over tongue and bars and reduces the nutcracker action. The offset centre link avoids a usual pressure point on the tongue. The nutcracker action results in the horse lifting its head.

INTRODUCING THE EDUCATION WEBSITE

We believe strongly in education and the development of our education website allows us to educate far more riders than we have previously been able to. It is a curated collection of our years of experience. Educating ourselves is the first step in doing the best we can for our horses. Have a look for yourself, I am sure you will find the information we offer extremely valuable. <https://www.bomberseducation.co.za/>
